

HAND SANITIZER ALCOHOL ANTISEPTIC 80% TOPICAL SOLUTION

▶ COVID-19 PANDEMIC RESPONSE

In direct response to customer needs during the COVID-19 pandemic, Ecolab is temporarily producing Hand Sanitizer Alcohol Antiseptic 80% Topical Solution, the World Health Organization's (WHO) recommended hand sanitizer formulation. Hand Sanitizer Alcohol Antiseptic 80% Topical Solution offers customers a way to continue to deliver on their goals of clean water, safe food, and abundant energy while considering employee health needs. Once the pandemic passes, Ecolab will discontinue production of Hand Sanitizer Alcohol Antiseptic 80% Topical Solution and will help identify appropriate, long-term hand hygiene products.

▶ HAND HYGIENE RECOMMENDATIONS

The **World Health Organization (WHO)**¹ and **Centers for Disease Control and Prevention (CDC)**² both recommend washing your hands often and correctly with soap and water for at least 20 seconds as the first line of defense for hand hygiene.

If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol. Avoid touching your eyes, nose and mouth with unwashed hands.

▶ KEY CONSIDERATIONS

- **Viscosity:** The high alcohol content ensures the hand sanitizer complies with CDC guidance, containing ethanol at higher than 60%, giving the product a thin, water-like consistency (not a gel, non-foaming).
- **Safety:** This product is highly flammable. Special safety precautions should be taken when handling and storing the product. See SDS for full details.
- **Labeling:** Secondary containers must be properly labeled.
- **Product Use:** Follow the label instructions.
- **Redistribution:** Hand Sanitizer Alcohol Antiseptic 80% Topical Solution is not to be redistributed or resold.
